PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/584,090	<b>Applicant(s)</b> MATSUMURA ET AL.	
	<b>Examiner</b> RYAN C. ROBINSON	<b>Art Unit</b> 2615	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 23 June 2008.
- 2a) ☐ This action is **FINAL**.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 1-19 is/are pending in the application.
- 4a) Of the above claim(s) 10-19 is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-9 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 22 June 2006 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All    b) ☐ Some \*    c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

### **DETAILED ACTION**

1. This communication is responsive to the provisional election made without traverse on 6/23/2008 to prosecute the invention of Group I, species I, subspecies I(a), claims 1-9. Other groups, including claims 10-19 are withdrawn from further consideration, as being drawn to a non-elected invention. A complete reply to a future final office action must include cancellation of non-elected claims or another appropriate action (37 CFR 1.144). See MPEP § 821.01.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 7 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim 7 recites the limitation "a boiling point of a substance adsorbed into the deterioration prevention material" at line 3. There is insufficient antecedent basis for this limitation in the claim. The parent claims 1 and 3 do not claim that a substance is adsorbed into the deterioration prevention material.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

**5. Claims 1-5, 7, and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dodd, US Publication 2006/0153410, filed on 10/2/2003 (hereby Dodd), in view of Zirlis, U.S. Patent No. 3,780,867, published on 12/25/1973, (hereby Zirlis).**

6. As to claim 1, Dodd teaches a speaker device (Fig. 1), comprising a cabinet (10), a speaker unit attached to the cabinet (11), and a first container (22), with an adsorbent material (20) disposed in an interior of the first container, and an air hole for passing air between the interior of the first container (22) and an interior of the cabinet (10) is formed through the first container. Dodd discloses that the container is a tube, (Para. 0033, line 3) suggesting an opening on either end.

It is noted that Dodd does not explicitly disclose that the first container is removably attached to a first opening formed in the cabinet. However having a removable container of adsorbent material is well known in the art and Zirlis teaches a first container (23) removably attached to a first opening (13) formed in the cabinet. It would have been obvious to one of ordinary skill at the time of applicant's invention to allow the first container taught by Dodd to be removable, because it is well known in the art that adsorbent properties of materials, in the case of Zirlis, activated charcoal (Col. 2, line 64), is not permanent, and requires recharging, and/or replacement. The

Art Unit: 2615

removable cartridge taught by Zirlis would have provided for a simple design, and ease of use. (Col. 1, lines 34-37).

7. As to claim 2, Dodd does not explicitly teach that the adsorbent material is activated carbon, however, examiner takes official notice that activated carbon is well known in the art for its adsorbent properties, and would have been a suitable design choice as an adsorbent to one of ordinary skill in the art.

8. As to claim 3, Dodd teaches a second container (14), having a deterioration prevention material (16) disposed in the interior of the second container (14). Dodd teaches that the second container could be placed inside the cabinet (10) (Para. 0030, lines 7-9). An air hole for passing air between the interior of the second container (14) and the interior of the cabinet is formed through the second container. The second container is disclosed as a tube having a bore (Para. 0030, line 10), corresponding to and air hole.

It is noted that Dodd does not teach that the second container is removably attached to a second opening formed in the casing. However, Zirlis teaches a first container removably attached to second opening formed in the cabinet. It would have been obvious to one of ordinary skill in the art at the time of applicant's invention to allow the second container taught by Dodd to be removable, because like the adsorbent material used the fist container, the deterioration prevention property of, in the case of

Art Unit: 2615

Dodd, a desiccant, is well understood in the art as being not permanent, and requiring recharging or replacement.

9. As to claim 4, Dodd does not explicitly teach that the deterioration prevention material is silica gel, however, examiner takes official notice that silica gel is well known in the art as a desiccant, and therefore would have been a suitable choice as a deterioration prevention material to one of ordinary skill in the art.

10. As to claim 5, Dodd teaches a port (12) for passing air between the interior and exterior of the cabinet (10), wherein the deterioration prevention material (16) provided in the second container (14) is disposed at a position such that the deterioration prevention material is closer to an opening which is in the interior of the cabinet and formed by the port, than the first container (22). Dodd teaches that the container for the deterioration prevention material (14) can be located anywhere inside the enclosure (Para. 0030), and since the deterioration prevention material is for removing moisture coming from port (12), locating the second container (14) near the inlet would have been an obvious design choice to one of ordinary skill.

11. As to claim 7, Dodd is silent as to the heat resistant properties of the second container, however one of ordinary skill would have taken into consideration heat resistant limits of any devices used in speakers. Furthermore, the second container

Art Unit: 2615

must have sufficient heat resistance in order to operate near the heat source disclosed by Dodd (Para. 0032, lines 1-2).

12. As to claim 9, Dodd teaches a tubular port (12), disposed for passing air between the interior and the exterior of the cabinet (10), a deterioration prevention material (16), and as supporting member (14), for supporting the deterioration prevention material. It is noted, however, that Dodd is silent as to whether or not the supporting member (14) is removably attached. However one of ordinary skill in the art would have allowed for a removable container, since it is well known in the art that the deterioration prevention property of, in the case of Dodd, a desiccant, is well understood in the art as being not permanent, and requiring recharging or replacement.

**13. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dodd, US Publication 2006/0153410, filed on 10/2/2003 (hereby Dodd), in view of Zirlis, U.S. Patent No. 3,780,867, published on 12/25/1973, (hereby Zirlis), further in view of Loop et al., US Patent No. 6,716,276, filed on 6/25/2002 (hereby Loop).**

14. As to claim 6, Dodd does not explicitly disclose that the deterioration prevention material includes cobalt chloride, and that the second container is formed such that the deterioration prevention material is capable of being seen from an exterior of the cabinet, however the use of cobalt chloride as an indicator for a deterioration prevention material is well known in the art. Loop teaches a deterioration prevention material (15),

Art Unit: 2615

that uses cobalt chloride as an indicator (Col. 1, lines 6-8). It would have been obvious to one of ordinary skill in the art to include cobalt chloride in a deterioration prevention material, in order to add the extra feature of indicating when the deterioration prevention properties are exhausted. (Loop: Col. 1, lines 27-30). Furthermore it would have been obvious to one of ordinary skill to allow the deterioration prevention material to be seen from an exterior of the cabinet, in order for a user to know when to replace the material.

**15. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dodd, US Publication 2006/0153410, filed on 10/2/2003 (hereby Dodd), in view of Zirlis, U.S. Patent No. 3,780,867, published on 12/25/1973, (hereby Zirlis), further in view of Maekawa et al., US Patent No. 6,632,771, published on 10/14/2003 (hereby Maekawa).**

16. As to claim 8, Dodd does not explicitly disclose that the deterioration prevention material includes a photocatalyst. However including a photocatalyst in a deterioration prevention material, in order to restore the properties of deterioration prevention is well known in the art and Maekawa teaches a deterioration prevention material, with a photocatalyst (Col. 2, lines 5-6). It would have been obvious to one of ordinary skill in the art to enhance the performance of the deterioration prevention material (Col. 1, lines 14-15).

***Conclusion***

The prior art made of record
